

Definition of Outreach Population

A complete IEHK with its basic and supplementary modules contains medicines and health products for an outreach population of 10,000 people for approximately 3 months. For clarity, the reference is to an outreach population of 10,000 people, which is the total number of people within the geographic zone served by a given health facility. It is important that planners define each outreach population when planning their use of the IEHK. In the IEHK, users will not find 10,000 units of any given product.

Basic IEHK Formulary

Module includes 10 (Outreach of 1,000 Population for 3 months)

(IEHK 2024 BASIC) UNIT, MEDICINE, AND RENEWABLES (1.1)
